DATA SCIENCE, DATA PIPELINES

SKILLS

Data Acquisition | REST APIs, web scraping and crawlers (requests, BeautifulSoup), JSON, CSV, NetCDF, geospatial data
Data Wrangling and Quality | Merging and deduplicating sources, group-by aggregation, validation suites, sanity tests
Data Pipelines and ETL | Resumable task queues, checkpointing, incremental processing, named pipes, email alerts on failure
Performance and Scale | Larger-than-memory processing (100+ GB), parallelization, runtime profiling, metrics logging
Batch Scheduling and Linux | Slurm on University of Utah CHPC, parallel batch jobs, SSH, tmux, Bash, grep, sed, awk, Make
Machine Learning | Gradient boosted machines (XGBoost), feature selection (PCA, UMAP), k-means, cross-validation
Statistical Testing | Hypothesis testing, t-tests, chi-square, non-parametric tests, multiple-comparison correction, effect sizes
Statistical Modeling | Linear and logistic regression, correlation analysis, confidence intervals, experimental design
Visualization and Reporting | Interactive Vega-Altair dashboards, matplotlib, ggplot2 in R, Google Sheets, Excel
Python and R | pandas, NumPy, SciPy, scikit-learn, GeoPandas, xarray, subprocess, venv, Jupyter, dplyr, RStudio
SQL and Data Modeling | ER diagrams, conceptual to physical schema design, DDL, primary and foreign keys, joins, GROUP BY
Git and Containers | Branching, merging, pull requests, GitHub, GitLab, Dockerfiles, Podman, Apptainer, GPU containers

EDUCATION

Master of Science in Biomedical Informatics May 2026

University of Utah | Salt Lake City, UT | Emphasis: Data Science and AI | GPA: 3.95

Bachelor of Science in Biology, magna cum laude May 2023

Utah Tech University | Saint George, UT | Emphasis: Biomedical Sciences | GPA: 3.80

EXPERIENCE

Research Assistant II Jun 2025 - Dec 2025

University of Utah - Department of Biomedical Informatics, Salt Lake City, UT

- Diagnosed why a published mutation classifier's precision fell from 0.71 on its benchmark data to 0.02 on pediatric patient data, showing its performance was highly sensitive to class ratio (somatic mutations were 18.7x rarer)
- Optimized pipeline efficiency and stability, reducing whole-genome analysis runtime 10x (~50 to 5 hours) via parallel, containerized per-chromosome Slurm jobs and a custom dynamic task scheduler that resumes from last completed step
- Eliminated harmless mutations from patient data by developing a pipeline that used set operations to filter against population databases (1000 Genomes, gnomAD), while retaining 96% of known cancer mutations
- Guided feature selection with dimensionality reduction (PCA, UMAP), then benchmarked GBMs (CatBoost, LightGBM, XGBoost) through a standard train, tune, resample workflow and selected the model by leave-one-out cross validation
- Influenced the project's direction in weekly technical presentations that summarized methods and findings with data visualization and statistical analysis, and collaborated with domain experts (cancer genomics, data science) on next steps
- Defended investment in the research to department leadership via a 30-minute technical talk, distilling 6 months of work and arguing for continued support of the lab's aims

Research Assistant Oct 2023 - Apr 2024

Utah Tech University - Klabacka Lab, Saint George, UT

- Automated retrieval of protein data for 4,747 genes across 5 species by REST API in a Dockerized Bash and Python pipeline that cleans, processes, and ranks each gene by genetic similarity between species, extensible to related bacteria
- Batch-generated data visualizations in R (ggplot2), looping one reusable chart design over data from 141 bacterial species to map a protein at 5 taxonomic levels and highlight positions where over 98% of species share the same amino acid
- Demonstrated that the target protein, though vital to bacterial survival, was only average in genetic similarity between species (56% of 2,257 genes scored higher), suggesting its few unchanging positions are what cells cannot live without
- Collaborated with a 5-person research team through a shared GitHub repository and regular lab meetings, unified code from multiple contributors into one automated pipeline, and presented findings at 3 research poster sessions

Laboratory Instructor, Biology 1625

Aug 2023 - May 2024

Utah Tech University - Department of Biological Sciences, Saint George, UT

- Led 3 lab sections of 18 to 24 students through full research cycles, teaching them to pose a question, state formal null and alternative hypotheses, design experiments, draw conclusions from statistical tests, and present for peer feedback
- Lectured on fundamentals of statistical testing and data analysis, including choosing the right types of tests for a dataset (paired and unpaired t-test, chi-square, linear regression) and visualizing findings in Google Sheets and Excel
- Trained students to combine statistical tests with multiple visualizations, and went beyond the syllabus with willing teams (KDE plots, post-hoc tests) to reveal patterns that only emerge when data is viewed from more than one perspective

Academic Tutor

Jan 2023 - May 2024

Utah Tech University - TRiO Student Support Services, Saint George, UT

- Provided first-generation and non-traditional students with a structured approach to independent study, assessing their knowledge and teaching them how to close the gaps in calculus, trigonometry, statistics, biology and chemistry
- Modeled programming concepts through worked examples in one-on-one sessions on introductory Python and R, building an iterative, experimental instinct for solving problems that students could apply to their own code
